The Page Seed Co.

*Chenango Valley Seed
Gardens*

Greene, New York

D. N. Shoemaker.

FEB 26 1924

To Our Customers:—

This is our Annual Wholesale Price List. The prices given are for dealers only and are those prevailing on the date of issue.

They are subject to change without notice. Many crops proved short in 1923, and many were total failures.

On account of these conditions we cannot be sure of the prices remaining as quoted or of our being able to supply all varieties listed.

Our seeds are sold by dealers only. We have no retail department.

We take this occasion to thank our dealer customers for their contribution to our success. We hope and expect to continue our supply to you of high quality seeds at reasonable prices which will merit a continuance of what we believe to be mutually pleasant business relations.

Our terms are: Vegetable or Garden Seeds—Cash on June 1st 1924. A special discount is given if invoice is paid in 10 days. Onion Sets, Corn, Oats, Field Peas, Millet, etc., are Net Cash. Prices are f. o. b., Greene, New York. Containers are extra.

Note: In common with all reputable seed firms, we offer and send out our seeds under the following Non-Warranty. "We give no warranty, express or implied, as to purity, description, quality, productiveness or any other matter of any seeds we send out, and will not be in any way responsible for the crop."

DANISH BALL HEAD—IMPORTED

Grown in Denmark

For several years we have been testing in our trial grounds various imported strains of this variety with a view of selecting the best type.

We can contract with some growers for one-half the price we now pay. We will not take the chances of poor quality or mixed stocks.

For the protection of our customers we produce a crop of cabbage from this stock before placing with the dealer. This is tested for Purity.

If we know of better stock, we would have it. We consider it as pure as any on the market.

CARROTS

TURNIPS

Yellow-Fleshed Sorts

	Per lb
Amber Globe—Large green top	\$ 35
Yellow Globe—Medium size	35
Golden Ball—Best, yellow flesh	35
Yellow Aberdeen—Late; keeps well, sweet	35
Yellow Stone—For table or stock	35

White-Fleshed Sorts

Purple Top Strap Leaf—The best known and most extensively grown	35
White Egg—Medium sized, oval, firm..	35
Early Snowball—Extra early, round, fine	35
Purple Top White Globe—Also known as Red Top White Globe. Fine grained..	35
Long White Cow Horn—Large, late....	35
Large White Globe—(Strap Leaf)....	35
Early White Flat Dutch—Sweet, fine grained	35
Pomeranian White Globe—Productive. Roots often weigh 10 lbs. Valuable for stock	35
Seven Top—Tops used for greens.....	35
White Milan	60

Ruta Bagas

(Also called Swedes or Russian Turnips)

Of slower growth and later in maturing than the turnips, but also much better keepers.

American Purple Top or Improved Long Island—Yellow, solid	35
Monarch, Tankard or Elephant—Yellow	35
White Swede or Russian—Also known as Sweet German. Flesh white.....	35
Yellow Swede—Quality good. Keeps well	35
Champion Purple Top	35
Budlong's White Rock—(Breadstone)..	35
Yellow Ruta Baga	35

PAGE'S STANDARD QUALITY FLOWER SEEDS

SWEET PEAS

Undoubtedly the most popular flower grown today and more widely used than any other. We grow thousands of pounds every year and handle only the choicest varieties.

SEED OATS

PAGE'S "MARVEL"

After repeated tests, we have found that Page's Marvel Oats possess those qualities that best adapt them to the conditions of our northern section.

The grains are large, thick and plump (nearly all meat) with little fiber. The hulls are exceedingly thin and brittle, often being broken in handling, giving the oats the appearance of having been clipped.

They are borne on stiff straws in upright, bushy heads. The growth is of a "tree form" with a remarkable root development enabling them to resist drought and be less liable to lodge. They are remarkable in their resistance to rust.

We consider Marvel Oats the most profitable variety, from every point of view, for the farmer to grow. They weigh from 44 to 48 pounds per measured bushel.

It costs no more to grow big crops of heavy Marvel Oats than to produce a small crop of light weight oats which is often due to "run out" seed.

We believe it essential for success in growing oats:

1. To secure the best variety for your soil and section.
2. To use the most thoroughbred seed money can buy.
3. To change the seed occasionally, always looking for the best.

Page's Marvel Oats are Pedigree stock of high purity and vitality.

Testimonials of satisfied growers are edorsements to all we claim for them.

Talk to your farmers, and send your order.

Price per bushel of 32 pounds \$1.00

PAGE'S HIGH-BRED SEED CORN

PA-SE-CO BRAND

All put up in bags containing 2½ bu. or 140 lbs. net, 56 lbs. to the bushel.

Write for prices.

Terms: All shipments are f. o. b. cars at Greene, N. Y. Sight Draft with Bill of Lading attached. Payable upon arrival of shipment.

Many crops of corn have been virtually ruined for seed by the severe freezing weather when corn contained an excessive amount of moisture. Therefore our list of varieties available for seed this season is materially reduced.

While at present February 1, we are uncertain as to varieties we can supply, yet we hope to be able to offer the following standard sorts.

Our aim is to hold to the Page Standard of Quality on all varieties we supply.

We recommend the Big Five Varieties as these were produced in sections less affected by the severe freezing weather.

DENT VARIETIES

Cuban Giant	Lancaster Sure Crop
Early Eureka	Leaming Improved
Fancy Yellow Dent	Luce's Favorite (L. I.)
Full Silo	Ninety Day Golden Dent
Golden Beauty	Pride of York
Golden Ensilage	Pride of the North
Gold Mine	Southern White
Hundred Day Bristol	True Va. Eureka
Lake Erie Dent	White Cap Yellow Dent

and

The Big Five Varieties, Pages 31-32

FLINT VARIETIES

Dutchess County Flint	Longfellow
Eight Row Yellow	N. Y. State 8 Row
Golden Nugget	Mammoth Yellow

PAGE'S BIG FIVE VARIETIES

For Ensilage

THEPAGE EARLY DENT

(A wonderful corn for Ensilage grown at a high elevation in the east) the best of our recent introductions. A distinct cross between a yellow and a white dent. The grain is light yellow usually showing a white cap, produced both on red and white cobs. The grains are medium length indicating earliness, are rich in protein, and produced on ears 8 to 10 inches long. Stalks grow larger, more leafy, and will produce more tons to the acre than any other early variety of which we know. This variety from experiments made, is well adapted to sections with high altitudes and short growing seasons.

Four Valuable Features

1. Northern Grown, encourages earliness.
2. Grown on upland soil, at a high altitude. Better adapted to our climate and soil conditions
3. Heavy producer of stalk and foliage.
4. Heavy in production of grain.

PAGE'S WEST BRANCH

Grown in the mountainous sections of the east. This variety we introduced to the trade several years ago, and the sales of Page's West Branch have increased remarkably each year. It is our purpose to place with the dealer the cream of the varieties of ensilage corn, or those best fitted for the dairymen's needs.

Page's West Branch fills the bill. Corn reaches its highest nutritive value when sufficiently matured that the grain is in the dough or pulpy stage.

It has yielded as high as 20 tons of ensilage to the acre. Heavy in its production of grain, usually one to two large ears to each stalk.

For good ensilage this is one of the five leading varieties.

LUCE'S FAVORITE—NORTHERN GROWN

Luce's Favorite is a variety that has come into prominence in recent years and this is due to its merits. On account of the high price

demanding by Long Island growers, we selected our seed stock from the Long Island grown seed and are now each year growing it in a more northern latitude and at a high elevation. We have developed an earlier and more productive strain in so doing, and have been able to make a much less price. It is a cross between a flint and a dent. Stalks good size, ears 8 to 10 inches long and usually eight rowed. Large bright yellow kernels, identical in appearance with the Long Island strain.

PAGE'S MAMMOTH YELLOW FLINT

The most productive flint variety. We introduced this variety to the trade several years ago as an ensilage variety. We believe it will soon take the lead for this purpose. Farmer's organizations are rapidly adopting it, which in itself is proof of its worth. It is heavy in its production of stalk and foliage, producing an abundance of the largest ears known to the flint types. It reaches maturity almost any season, reaching the ideal stage for ensilage. The ears in ensilage represent fully 63% of the digestible food in a corn plant, 90% of the oil is in the germ. Your real food value is right there. Compare the size of the germ in Page's Mammoth Yellow Flint with that of any other variety. We do not want to discourage its use as a husking variety for it is about the same in earliness as the average flint type. If, however, you are looking for an early 8 row variety try our New York State Early 8 Row. Mammoth Yellow Flint is best for ensilage.

GOLDEN NUGGET

For several years past, it has been almost an impossibility to obtain the true Hall's Golden Nugget. The Page Seed Co., at considerable expense, has grown up a stock of this variety, and, by careful growing and selecting, have as near the old type original strain as possible to produce, the stocks having become somewhat mixed a few years ago, it was almost impossible to secure the ideal type.

This is one of the best varieties for the northern country, being heavy in stalk, foliage and grain, rich in oil and protein, and one of the Five Leading Varieties for ensilage.

Quantity of Seed Required for 100 feet of Row

Beans	1 pt.	Lettuce	½ oz.
Beans—Pole	½ pt.	Melons	1 oz.
Beets	2 oz.	Onion Seed	1 oz.
Cabbage	½ oz.	Onion Sets	1 qt.
Carrot	1 oz.	Parsley	½ oz.
Cauliflower	¼ oz.	Parsnip	1 oz.
Kale	½ oz.	Peas	1 pt.
Endive	½ oz.	Radish	1 oz.
Egg Plant	¼ oz.	Salsify	1 oz.
Cucumber	½ oz.	Squash	1 oz.
Corn	½ pt.	Turnip	1 oz.
Celery	¼ oz.		

Length of Time Required for Seed to Germinate

	Days		Days
Asparagus	6-8	Kale	4-6
Beans	6-8	Melons	6-10
Beets	8-14	Onion Seed	6-10
Collards	4-6	Parsley	20-30
Carrots	14-21	Parsnip	7-14
Celery	7-14	Peas	6-8
Corn	6-8	Radish	3-6
Cauliflower	4-6	Salsify	7-14
Cucumber	6-8	Spinach	6-10
Egg Plant	7-14	Squash	7-14
Endive	4-6	Turnip	4-6

Length of Time Required for Vegetables to Mature

	Days		Days
Beans—Snap	45-55	Onion Seed	120-180
Beans—Lima	50-60	Onion Sets	90-120
Beans—Pole	50-75	Parsley	90-120
Beets	60-75	Parsnip	120-150
Cabbage	75-180	Peas	40-75
Carrot	60-75	Pepper	100-120
Cauliflower	100-120	Radish	20-45
Celery	120-180	Salsify	120-175
Corn	50-110	Spinach	30-75
Cucumber	60-75	Squash	60-75
Lettuce	40-90	Tomato	100-150
Melons	100-120	Turnip	45-75
